Uploading a file

To avoid opening file browser to upload files, we can use send keys passing the file absolute (full) path

1. Make sure element can receive files by finding the accept attribute:

```
<input id="   X   :" accept="image/*" name=
"f           " type="file" class="(                    :r-
:           !">
```

2. Pass the path of the file you want to upload using send keys:

driver.find_element_by_id('**x**').send_keys('C:\Users\user\desktop**1.jpg**')
